About the University Center for Social and Urban Research (UCSUR)

The University Center for Social and Urban Research (UCSUR) was established in 1972 to serve as a resource for researchers and educators interested in the basic and applied social and behavioral sciences. As a hub for interdisciplinary research and collaboration, UCSUR promotes a research agenda focused on the social, economic and health issues most relevant to our society. UCSUR maintains a permanent research infrastructure available to faculty and the community with the capacity to: (1) conduct all types of survey research, including complex web surveys; (2) carry out regional econometric modeling; (3) analyze qualitative data using state-of-the-art computer methods, including web-based studies; (4) obtain, format, and analyze spatial data; (5) acquire, manage, and analyze large secondary and administrative data sets including Census data; and (6) design and carry out descriptive, evaluation, and intervention studies. UCSUR plays a critical role in the development of new research projects through consultation with faculty investigators.

The long-term goals of UCSUR fall into three broad domains: (1) provide state-of-the-art research and support services for investigators interested in interdisciplinary research in the behavioral, social, and clinical sciences; (2) develop nationally recognized research programs within the Center in a few selected areas; and (3) support the teaching mission of the University through graduate student, post-doctoral, and junior faculty mentoring; teaching courses on research methods in the social sciences; and providing research internships to undergraduate and graduate students. Achieving these goals requires that we continually upgrade and improve the research infrastructure of the Center, and that we recruit, develop, and maintain a core staff of investigators capable of being leaders in their fields.

About the Program in Urban and Regional Analysis

UCSUR's Urban and Regional Analysis Program focuses on economic change in the Pittsburgh region. UCSUR is a research affiliate of the Pennsylvania State Data Center (PaSDC) and maintains the Pittsburgh REMI model, an economic impact model for conducting economic impact analysis and economic and demographic forecasting for the greater Southwestern Pennsylvania Region. This report is part of the Program's decades-long work to studying patterns of change in Pittsburgh neighborhoods.

UCSUR's Urban and Regional Analysis Program also maintains the Pittsburgh Neighborhood and Community Information System (PNCIS), a property information system that collects integrated information on community conditions and provides it to local stakeholders. The PNCIS is a partnership of UCSUR, the Pittsburgh Partnership for Neighborhood Development (PPND), the City of Pittsburgh, and other stakeholders. UCSUR operates PNCIS in agreement with the City of Pittsburgh and PPND.

**City of Pittsburgh Neighborhood Profiles – American Community Survey
2006–2010 5-Year Estimates**

Overview

This report compiles data from the U.S. Census Bureau’s American Community Survey (ACS) for City of Pittsburgh neighborhoods. The ACS is a relatively new source of information for analysis of small geographic areas. The City of Pittsburgh defines 90 neighborhoods, each of which is a collection of one or more census tracts or census block groups. The index of specific census tracts or census block groups to City of Pittsburgh neighborhoods is included in the appendix to this report.

The ACS is a relatively new program which replaced what was known as the “long form” of the decennial census. The majority of data collected by the decennial census in recent decades came from a longer set of questions asked of one in six households in the nation. This “long form” questionnaire was eliminated in the 2010 decennial census. Users should note the summary explanation of the ACS program described in the next section.

The data compiled in this report is from the 2nd annual release of 5-year estimates data from the ACS program and reflects data collected over the 2006-2010 period. Because of changes in the collection methodology, the 5-year estimates data for the period 2006-2010 should not be compared directly to the first 5-year estimates, which were produced for the 2005-2009 period.

In addition to the previous report based on ACS data, this report follows similar reports of neighborhood conditions compiled by UCSUR. Past neighborhood data compendiums are available on UCSUR’s web page (www.ucsur.pitt.edu) and include sets of neighborhood reports from 1974, 1977, and 2000. UCSUR produced “The Social Geography of Allegheny County” for 1990 Census data which is available in print form upon request. Past projects focused on neighborhood level data for the City of Pittsburgh include the Pittsburgh Atlas Project from the 1970s, and the Pittsburgh Neighborhood Information System (NIS) generated in the 1980s, which compiled data for all city neighborhoods back to 1930. Today, UCSUR’s focus for neighborhood level data is also encompassed in the Pittsburgh Neighborhood and Community Information System (PNCIS), which includes an interactive GIS system of address-level data for the City of Pittsburgh and other communities in Allegheny County.

**City of Pittsburgh Neighborhood Profiles – American Community Survey
2006–2010 5-Year Estimates**

Using the American Community Survey

This American Community Survey (ACS) uses a series of monthly samples to produce annually updated data for the same small areas (census tracts and block groups) formerly surveyed via the decennial census long-form sample. For neighborhood data, the major difference between the “long form” census data and the ACS is that the ACS has a smaller sample size than the long form. To obtain reliable estimates for small areas, multiple years of ACS data must be combined to produce a single indicator. Data for these smaller levels of geography are only reported for specified multi-year periods. For all geographic areas with populations over 65,000, the ACS reports data for single years. For geographic areas with populations between 20,000 and 65,000, the ACS reports data derived from three years of survey responses. For small geographic areas below 20,000 in population, a level of geography that includes both census tracts and census blocks groups, the ACS reports data aggregated from five years of survey responses.

City of Pittsburgh neighborhoods are currently defined by either a single census tract, a collection of census tracts, or by census block groups, a level of geography smaller than the census tract. The 5-year ACS data is the only data set available from the program that can be used to compile information at neighborhood level geographies within the City of Pittsburgh. The ACS program will release new data annually, but for the smallest geographies, the data will reflect a new five year time frame for each release.

Users need to know that most data reported at small area geographies in the ACS have significant margins of error. Data for individual census tracts and the associated margins of error for each datapoint referenced in these tables are available online via the Census Bureau’s Factfinder online website (<http://factfinder.census.gov>.) In general, sample error is larger for smaller areas, or in particular, for smaller subgroups of populations within an area. The nature of these errors should also be taken into account when comparing neighborhoods with each other or comparing data compiled by the ACS with previous decennial censuses.

It is recommended that the data released by the ACS program should be used to understand the *characteristics* of specific geographic areas. The data generally should not be used as a reference for the specific *counts* of individuals, households, or housing units. The profiles in this report use ACS data collected by survey responses between January 2006 and December 2010. This is the second annual update of 5-year estimates data from the ACS program. The Census Bureau advises that the results of the 5-year estimates data produced for the 2006-2010 period should not be compared directly to the first 5-year estimates data produced for the 2005-2009 period. Because the population controls used in the ACS methodology for the five-year 2009 release uses data dating back to the 2000 decennial census, the usefulness of the ACS for measuring absolute changes in population levels between reporting periods is limited.

Other census programs are recommended for capturing total population counts, including the decennial census and the Census Bureau’s Population Estimates Program (PEP), which provides annual population data for all counties, and county equivalents, and most incorporated places in the United States. The Census Bureau’s PEP does not produce

**City of Pittsburgh Neighborhood Profiles – American Community Survey
2006–2010 5-Year Estimates**

any population counts for levels of geography smaller than municipalities in Pennsylvania, and as such does not provide any data that can be used to compile neighborhood level population changes.

When comparing ACS data to past data compiled from any decennial census, users should note other differences between the census programs. The decennial census is data collected at a point in time, with a reference date for recent censuses of April 1 of the decennial year. The ACS data is collected continuously throughout the year. As such it does not reflect a single point in time as does the decennial census. Certain data that can be impacted by seasonal trends throughout the year may see distinct differences in results between the two methodologies.

Also, changes in the geographic boundaries of census tracts promulgated with the 2010 Census have impacted the type of data that can be reported for certain neighborhoods within the City of Pittsburgh. Certain census tracts in Allegheny County had population sizes below the minimum required by the Census Bureau. As a result, certain census tracts defined in the past have been merged or otherwise had their boundaries altered in 2010. Minimum census tract-sized are required by the Census Bureau in order for sufficient survey responses to be collected and to meet other requirements for confidentiality in the results reported. The merging of certain tracts means that some City of Pittsburgh neighborhoods could no longer be defined as a collection of one or more census tracts. Instead, some City of Pittsburgh neighborhoods are defined by census block groups, a smaller level of geography.

Understanding the methodology of the ACS program will allow users to best use this new source of data for neighborhood analysis. One distinct advantage of the ACS program is that it will provide annual updates for many types of data that previously were only available with the decennial census. Nonetheless, the differing methodology between the ACS and decennial census limits some of the direct comparisons of specific information. The table below itemized the specific tables in the ACS 5-year estimates data used to compile the profile data in this report. The ACS tables are the source of the data used here, though specific categories are collapsed for the tables presented here.

American Community Survey Tables used to compile profile tables

Profile Table	Table	Census Table Name
Population by Race	B02001	Race
Family Structure	B11001	Household Type (Including Living Alone)
Group Quarters	B26001	Group Quarters Population
Place of Birth By Citizenship Status	B05002	Place Of Birth By Citizenship Status
Population by Age Group	B01001	Sex By Age
School Enrollment	B14002	Sex By School Enrollment By Level Of School By Type Of School For The Population 3 Years And Over
Household Income	B19001	Household Income In The Past 12 Months
Poverty	C17002	Ratio Of Income To Poverty Level In The Past 12 Months
Tenure	B25003	Tenure
Educational Attainment	B15002	Sex By Educational Attainment For The Population 25 Years And Over
Commuting	B08006	Sex Of Workers By Means Of Transportation To Work
Migration	B07003	Geographical Mobility In The Past Year By Sex For Current Residence In The United States

**City of Pittsburgh Neighborhood Profiles – American Community Survey
2006–2010 5-Year Estimates**

Neighborhood Profiles

The 2006-2010 American Community Survey (ACS) data has been compiled to produce neighborhood profiles for the City of Pittsburgh. These profiles reflect the characteristics of the residents of each identified neighborhood. The neighborhood definitions are those currently used by the City of Pittsburgh and have been matched by UCSUR to the boundaries of census tracts and census block groups. For historical comparisons, users should note that City of Pittsburgh neighborhood definitions have changed over the decades.

Changes made by the Census Bureau to the boundaries of census tracts in Allegheny County have impacted the data that can be compiled from the ACS for City of Pittsburgh neighborhoods. Beginning with revisions of tract boundaries in 2010, certain City of Pittsburgh neighborhoods are no longer uniquely defined by a census tract, or a set of census tracts, as had been the case in 2000. Some city neighborhoods are defined only by census block groups, a level of geography smaller than a census tract. In the ACS 5-year estimates, certain data that is available for census tracts is not reported for census block groups. As a result, only certain neighborhoods have complete data compiled in the profiles compiled here. Neighborhoods that are defined in whole or part by Census Block Groups do not have data available for tables on Commuting, Migration, Group Quarters and, Nativity (place of birth).

City of Pittsburgh neighborhoods defined in part by census block groups

Allegheny Center	Elliott	Ridgemont
Allegheny West	Esplen	Sheraden
Arlington	Fairywood	St. Clair
Arlington Heights	Glen Hazel	Terrace Village
Beltzhoover	Hays	West End
Bon Air	Hazelwood	West Oakland
Chartiers City	Mt. Oliver	Westwood
East Allegheny	North Shore	Windgap
East Carnegie	Oakwood	

Individual profiles are provided for 87 of the 90 neighborhoods as defined by the City of Pittsburgh, and for three larger areas: the City of Pittsburgh, Allegheny County, and the seven-county Pittsburgh Metropolitan Statistical Area (MSA). The neighborhood defined as Chateau is excluded because the ACS sample for the 2006-2010 estimates reported no data for the tract that makes up the neighborhood. In addition, the neighborhoods of Hazelwood and Glen Hazel are combined solely for presentation here as a single neighborhood for a total of 88 separate neighborhood profiles. For each area, one page of demographic profiles and one page of economic profiles are provided. For the neighborhoods defined in whole or part by census block groups, unavailable tables are blank.
