INTRODUCTION

The Pittsburgh Neighborhood Alliance was formed in 1969 by a number of neighborhood organizations that were concerned with improving the city's neighborhoods and their relations with city government. The members of the Alliance recognized that in order to negotiate effectively with city government about such major concerns as public service needs, capital improvements and transportation, it was necessary to obtain accurate, up-to-date information about the neighborhoods. Unfortunately, this information was not available.

To remedy this situation, the Alliance developed its Pittsburgh Neighborhood Atlas project. First, the boundaries of the city's neighborhoods had to be determined. The Pittsburgh Neighborhood Atlas asked people attending community meetings to name and describe the boundaries of the neighborhoods in which they lived. This information was also provided by an Atlas-initiated survey. Responses from every voting district of the city were analyzed to assure citizen involvement at the neighborhood level. Seventy-eight neighborhoods were thus identified, each made up of one or more whole voting districts in order to comply with provisions in Pittsburgh's home rule charter relating to the election of community advisory boards.

The Atlas then gathered a body of useful and up-to-date information for every neighborhood. It is the beginning of a neighborhood information system that more closely reflects neighborhood boundaries as defined by residents instead of by public officials. In the past, statistics about sections of the city have been based on information published for relatively large areas such as census tracts. For the atlas, much of the material describing neighborhood characteristics came from figures compiled for smaller areas: voting districts or census blocks. As a result, detailed information is now available for neighborhoods whose boundaries differ substantially from census tract boundaries.

The information in this atlas provides an insight into current neighborhood conditions and the direction in which the neighborhood is moving. The best indicators showing the health of the neighborhood are provided by citizen satisfaction with the neighborhood, and changes in residential real estate transaction prices. Comparison of these statistics to those for the entire city provide a basis to begin understanding issues of neighborhood stability. In the years to come, as additional data are gathered for each of these indicators, trends will become more obvious.

It is important to recognize that neighborhood change is a complex process and that one indicator by itself may not be useful. Neighborhoods may be healthy regardless of their level of income, and therefore income-related statistics may not be useful guides by themselves. Neighborhoods must be viewed over time in terms of relative changes compared to the city as a whole, and any analysis of neighborhood conditions must focus upon all of the data in order to provide a comprehensive understanding.

To learn about specific sections of the neighborhood, figures by individual voting district or census tract may be obtained. Additional information on the neighborhood or the information system is available through the Center for Urban Research of the University of Pittsburgh, which has made an outstanding contribution to the development of this atlas.

NEIGHBORHOOD HISTORY
TROY HILL

The history of Troy Hill, a small hilltop community on the North Side, is intertwined with that of Old Allegheny. Early in the 19th century, German immigrants moved from the flats of Allegheny to the adjacent hillsides. They wanted to live close to their places of employment in nearby mills and breweries but far enough away to retain their old world customs.

An early property owner in the community, then known as the "Village of New Troy", was Elizabeth Seymore of Troy, New York. As a part of Reserve Township, by 1866, Troy Hill was populated by 100 families, mostly German or Czech.

When the Pennsylvania Railroad moved to Pittsburgh, many of its employees found Troy Hill a convenient place to live. Economic expansion and the paving of Troy Hill Road increased the number of families to more than 200. William Eberhardt and John Ober, both of whom lived in Troy Hill, employed many local residents at their nearby brewery.

Troy Hill became the 13th Ward of Allegheny in 1877.

Troy Hill and its environs did not serve as a residential area alone. Residents of nearby Mount Troy supplemented their income by raising crops - head lettuce, spinach, cabbage - to be sold at the produce market in the city below. Later, inhabitants of Troy Hill proper opened their own little shops and stores, making the community both self sufficient and closely knit.

The people of Troy Hill brought devout religious beliefs with them to the new world. In 1868, the Most Holy Name of Jesus Roman Catholic Church and School were established. Its Chapel of St. Anthony, built in 1880, houses the relics of 5,000 early Christian saints and martyrs.

Numerous social organizations were founded, too, including the Liedertafel, The Troy Hill Mannechor, St. Anthony's Lyceum and the Deutscher Unterstutzensbund. To promote physical fitness, a Turnverein was organized and, in 1890, Turner Hall was built.

Annexed to the City of Pittsburgh as part of Allegheny in 1907, Troy Hill had and has a very Germanic character.

TROY HILL
SUMMARY STATISTICS

	<u>Neighborhood</u>	<u>Pittsburgh</u>
Population (1974)	3,853	479,276
% Change (1970-1974)	-3%	-8%
% Black population (1970)	0%	20%
Housing units (1974)	1,304	166,625
% Vacant	4%	6%
% Owner-occupied housing units (1974)	58%	54%
Average sales price of owner-occupied dwellings (1975)	\$11,201	\$23,518
% Residential real estate transactions with mortgages provided by financial institutions (1975)	46%	59%
Crime rate (1975)	0.016	0.053
Average family income (1969)	\$ 8,800	\$10,500
Income index as % of city index (1974)	92%	
% Satisfied with neighborhood (1976)	59%	41%
Major neighborhood problems (1976)	Dog litter Alcoholism	Poor roads Dog litter Burglary

CITIZEN SURVEY

The purpose of the citizen survey was to obtain attitudes about the quality of the neighborhood environment. Citizens were asked to respond to questions concerning the neighborhood as a whole, neighborhood problems, and public services. The attitudinal data, heretofore not available, are key indicators of the relative health of the neighborhood. By specifying neighborhood problems or public service needs, the information may be a useful guide for public investment or service delivery decisions.

The city-wide survey was mailed to a randomly selected sample of registered voters. Of approximately 35,000 households contacted 9,767 responded. The sample provides a 5% response rate for each of the city's 423 voting districts. (See Appendix for a profile of the respondents as well as for statistics on voter registration.)

I. Neighborhood Satisfaction

Troy Hill residents are generally more satisfied with their neighborhood than residents city-wide. Table 1 shows that 59% of the citizens responding to the survey were satisfied with their neighborhood compared to 41% in all city neighborhoods. When asked to state whether the neighborhood is better or worse than two years ago, 20% said that it was better which exceeded the city-wide response of 12%. Given the opportunity to move from the neighborhood, 65% said they would continue to live there compared to a response of 45% for the city as a whole. The responses to these satisfaction questions indicate a more positive attitude of residents toward their neighborhood compared to citizens city-wide.

TABLE 1

Neighborhood Satisfaction
Troy Hill

Question 1: Generally, how satisfied are you with conditions in the neighborhood?			
	Satisfied (%)	Dissatisfied (%)	Neither (%)
Troy Hill	59	19	21
All neighborhoods	41	37	21

Question 2: Do you think this neighborhood has gotten better or worse over the past two years?			
	Better (%)	Worse (%)	Not Changed (%)
Troy Hill	20	39	37
All neighborhoods	12	49	36

Question 3: If you had your choice of where to live, would you continue living in this neighborhood?			
	Yes (%)	No (%)	Not Sure (%)
Troy Hill	65	15	14
All neighborhoods	45	32	18

SOURCE: Citizen Survey, 1976.

NOTE: The percent responses to each question do not add up to 100%. The difference is accounted for by the following: "don't know", "unable to evaluate", or no answer.

II. Neighborhood Problems

In order to identify specific neighborhood problems, residents were asked to consider twelve problems usually associated with urban communities and rate them for the neighborhood. Table 2 compares the problem ratings of the respondents from Troy Hill to those from all city neighborhoods. Areas of particular concern for the neighborhood include dog litter and alcoholism.

III. Satisfaction with Public Services

Table 3 shows the satisfaction of Troy Hill residents with their public services and compares the responses to data for all city neighborhoods. City-wide, residents are least satisfied with street and alley maintenance. Troy Hill residents are more satisfied with respect to garbage collection and the fire department, and less satisfied with respect to street and alley maintenance and public transportation.

The Citizen Survey also asked the respondents to list the services with which they were the least satisfied and to explain the reasons for their dissatisfaction. Residents from Troy Hill gave the greatest number of reasons for dissatisfaction to the services listed below. Included is a summary of the major reasons for their dissatisfaction.

1. Street and alley maintenance: Poor maintenance; need for better street repair; problems with potholes.
2. Public transportation: Need for more efficient transportation system; need better bus scheduling.
3. Schools: No schools in the neighborhood.

TABLE 2

Neighborhood Problems
Troy Hill

Problem Category	Problem Rating - Percent Response		
	<u>Not a Problem</u>	<u>Minor or Moderate</u>	<u>Big or Very Serious</u>
Unsafe streets			
Troy Hill	41	47	5
All neighborhoods	25	45	21
Vandalism

SOURCE: Citizen Survey, 1976.

NOTE: The percent responses to each question do not add up to 100%. The difference is accounted for by the following: "don't know", "unable to evaluate", or no answer. Public health and mental health/mental retardation services are not included in the table because the response rates to these questions were low.

CRIME RATE

The crime rate for major crimes has fluctuated over the last three years (Table 4). For 1973 the number of major crimes per capita was .019. The crime rate decreased in 1974 to .014; then increased to .016 in 1975. The crime rate in the neighborhood was less than the city per capita rate of .053 in 1975.

TABLE 4

Crime Rate: Major Crimes
Troy Hill

<u>Year</u>	<u>Major Crimes</u>	<u>Crime Rate</u>	
	<u>Number</u>	<u>Neighborhood</u>	<u>Pittsburgh</u>
1973	75	.019	.043
1974	55	.014	.047
1975	61	.016	.053

SOURCE: City of Pittsburgh, Bureau of Police.

NOTE: Major crimes are murder, rape, robbery, assault, burglary, and theft. The neighborhood crime rate is computed by dividing the number of crimes committed in the neighborhood by its adjusted population for 1974.

THE PEOPLE

Table 5 and Table 6 present data on the characteristics of the neighborhood population and compare them to city-wide statistics.

In 1974, the estimated population of Troy Hill was 3,853, down by 3% since 1970. This compares to a city-wide population decline of 8% during the same period. Information on the racial composition of the neighborhood is not available for 1974; however, there was no black population in the neighborhood in 1960 or 1970. Pittsburgh's Black population was 20.2% of the total in 1970.

The average household size in the neighborhood was 2.70 persons in 1974, down from 2.81 in 1970. The percentage of the population 65 years and older was 13.5% in 1970, the same as for the city as a whole.

TABLE 5

Population and Housing Characteristics, 1970 and 1974
Troy Hill

	<u>Neighborhood</u>		<u>Pittsburgh</u>	
	<u>1970</u>	<u>1974</u>	<u>1970</u>	<u>1974</u>
Population				
% Black	0.0%	20.2%
% 65 years and over	13.5%	13.5%
Households				
% One-person households	26.8%	24.5%	25.4%	25.5%
% Retired head-of-household	30.5%	26.3%
% Households with children	33.4%	32.7%
% Female head-of-household with children	6.7%	6.4%
% In owner-occupied housing unit	56.9%	58.1%	50.3%	54.2%
% Households changing place of residence within past year	18.8%	27.0%
Average household size	2.81	2.70	2.82	2.67

SOURCES: U. S. Census (1970) and R. L. Polk & Co. (1974).

NOTE: Dotted lines (....) indicate data unavailable for that year.

The turnover rate of households in the neighborhood is less than that for all of the city's neighborhoods. During 1973, 18.8% of the households in the neighborhood changed their place of residence compared to a rate of 27.0% for the city. (The figures represent households who have moved within the neighborhood or city as well as those moving into or out of the neighborhood or city.)

Female-headed households with children in 1974 comprised 6.7% of the total households in the neighborhood compared to 6.4% for the city as a whole. In 1974, one-person households consisted of 24.5% of the total households in the neighborhood compared to 25.5% city-wide and to 26.8% for the neighborhood in 1970.

TABLE 6

Neighborhood Change: 1960-1970 and 1970-1974
Troy Hill

	<u>Number</u> <u>Neighborhood</u>	<u>Percent Change</u>

1974	(not available)		
Housing units			
1960	1,478		
1970	1,449	- 2	- 3
1974	1,304	-10	-12

SOURCES: U. S. Census (1960; 1970) and R. L. Polk & Co. (1974).

NOTE: The population figures reported by Polk are adjusted to account for under-reporting. Population includes persons living in institutions and other group quarters, such as nursing homes, dormitories or jails. Differences in the population, household, or housing unit count between 1970 and 1974 are due primarily to changes occurring in the neighborhood. A small percentage of the difference may be accounted for, however, by variations in data gathering techniques. Census statistics were compiled from information provided by all city households answering a standard questionnaire either by mail or interview on or about April 1, 1970. R. L. Polk collected its information by a door-to-door survey carried out over a period of several months. (See Appendix.)

¹The number of occupied housing units equals the number of households.

²Non-white households in 1960.

NEIGHBORHOOD INCOME

The average family income in Troy Hill was \$8,800, 84% of the city average, for the year 1969. R. L. Polk and Company computes an income index for each city census tract. This index, derived from the occupation of heads of households, was used to calculate the income index of the neighborhood. In 1974, the index for Troy Hill was 92% of the figure for the city as a whole.

Table 7 shows the number of neighborhood households receiving cash grants in 1974, 1975 and 1976 under the public assistance program of the Pennsylvania Department of Welfare. Public assistance in the form of food stamps, Medicaid, and various social services are also available to these households, as well as to other households in need. Public assistance payments were made to 8.5% of the neighborhood households in 1976, a lower proportion than for the city overall and a decrease since 1974.

TABLE 7

Public Assistance: Households Receiving Cash Grants
Troy Hill

<u>Year</u>	<u>Neighborhood</u>		<u>Pittsburgh</u>
	<u>Number</u>	<u>Percent</u>	<u>Percent</u>
1974	122	9.6	16.0
1975	111	8.8	17.2
1976	107	8.5	18.0

SOURCE: Allegheny County Board of Assistance.

NOTE: The percentages are based on 1974 Polk households. Only households receiving cash grants under Aid to Dependent Children, Aid to Dependent Children-Unemployed Parent; General Assistance, and State Blind Pension programs are tabulated. The count is of those on assistance as of April 5, 1974, February 28, 1975, and February 27, 1976; households whose grants were terminated between reporting dates are not included.

HOUSING

Table 6 shows that the number of housing units in Troy Hill decreased during the decade of the sixties and decreased from 1970 to 1974. Of the occupied housing units, 58.1% were owner-occupied in 1974, compared to a city-wide rate of 54.2%. (See Table 8.) The vacancy rate in 1974 for the neighborhood was 3.8% which was less than the rate for the city as a whole.

The average value of owner-occupied housing in the neighborhood was \$9,800 in 1970, compared to a city-wide average of \$14,800.

TABLE 8

% One-unit structures	50.7	52.9
Occupied housing units				
% Owner-occupied	56.9	58.1	50.3	54.2
Average value: owner-occupied units ¹	\$9,800	\$14,800

SOURCES: U. S. Census (1970) and R. L. Polk & Co. (1974).

¹Average value rounded to nearest one hundred dollars.

REAL ESTATE AND MORTGAGE LOAN TRANSACTIONS

The average sales price of owner-occupied housing was \$11,201 in 1975. (See Table 9.) Although the average price was less than the city-wide average, the implications of this divergence are difficult to judge because of variations in the quality and size of the structures among city neighborhoods. As additional data are obtained, however, the trend in real estate prices for the neighborhood can be compared to the trend for the city as a whole in order to determine relative differences.

In order to evaluate the extent to which private lenders are involved in the neighborhood, the number of mortgage loans made on residential property each year must be divided by the number of residential real estate transactions for that year. The percentage of residential real estate transactions financed through financial institutions was 46% in 1975 in Troy Hill compared to a city-wide rate of 59%. The implications of the difference between the two rates are difficult to discern because of variations in risk factors and income levels among city neighborhoods. However, as additional data become available, trends in lending activity within the neighborhood compared to other neighborhoods or to the city as a whole can be assessed.

1975	46%	59%

SOURCE: City of Pittsburgh, Department of City Planning.

APPENDIX

a. Data Sources: Information for the atlas was obtained from the 1960 and 1970 U. S. Census of Population and Housing; R. L. Polk and Company's "Profiles of Change" for Pittsburgh in 1974; Pittsburgh's Department of City Planning and Bureau of Police; the Allegheny County Board of Assistance, and Department of Elections and Voter Registration; Southwestern Pennsylvania Regional Planning Commission; and the Citizen Survey conducted by the Pittsburgh Neighborhood Atlas.

b. Neighborhood Census Tracts: 2403 and part of 2402.

c. Methodology: The opinions and characteristics of survey respondents, as well as voter registration, were recorded by voting district and then compiled for Troy Hill by the Pittsburgh Neighborhood Atlas in conjunction with the Center for Urban Research, University of Pittsburgh. Other material in the atlas was drawn from statistics tabulated for city census tracts or census blocks.

The neighborhood boundaries, which were determined on the basis of whole voting districts, do not conform exactly to census tract boundaries, so minor boundary adjustments were made wherever possible to simplify data collection efforts. In Troy Hill and in other parts of the city where substantial portions of a census tract fall in more than one neighborhood, the neighborhood characteristics for 1960 and 1970 were arrived at by adding together data for the census blocks in the neighborhood, item by item. The statistics from sources other than the U. S. Census were made available only by census tract, not by census block; therefore a method for prorating the data among neighborhoods was developed. The procedure allocated data for each neighborhood containing partial census tracts on the basis of the proportion of total tract population, households, or housing units contained in each sub-section.

To compensate for under-reporting, the 1974 figure for the neighborhood population has been increased by 1.11, a factor that was derived from the U. S. Bureau of the Census 1973 population estimate for Pittsburgh. An additional adjustment has been made where applicable, since Polk and Co. does not count persons living in institutions or other group quarters. To arrive at the total estimated population for 1974, the neighborhood population was further increased by adding the number of persons in group quarters for the neighborhood according to the 1970 Census.

d. Characteristics of the Sample: In Troy Hill, 99 citizens answered the questionnaires. Based on the number of replies to each question, the characteristics of the respondents can be generally described as follows: an average age of 52; 60% female; 0% Black; 72% with at least four years of high school education; 70% homeowners; and an average of 32 years in the neighborhood. The median household income falls in the range of \$10,000 to \$14,999; the average household size is 3.77 persons; and 68% of the households have no members under 18 years old living in the home.

The total sample (all respondents to the survey) was over-represented by homeowners (68% compared to 50% for Pittsburgh in 1970) and under-represented by Blacks (14% compared to a city Black population of 20% in 1970).

e. Voter Registration: In November, 1976, 2,027 residents of the neighborhood were registered to vote, a decrease of 68 (-3.2%) since November, 1975. In this period, city registration increased by 1.3% to 233,028.

In the process of collecting data for this publication, the Pittsburgh Neighborhood Atlas staff was assisted by many community organizations. The following list reflects the organization that we were able to make contact with in Troy Hill:

Troy Hill Citizens Incorporated
1530 Hatteras Street
Pittsburgh, Pa. 15212 (April, 1970)
321-7177

Note: Dates in parenthesis indicate when organization started.
