This report addresses chronic absence in Woodland Hills Public School District and its association with student demographic variables, within-year move, Human Service variables, census tract variables, and house assessment data. Student files from the year of 2013 were combined with student records from DHS. The census tract data and housing information were integrated with student level data. Only students with valid total number of enrollment dates were included, resulting with 3260 students. The minimum number of enrollment dates is 53.

- Attendance rate was computed by summing excused and unexcused absences divided by enrollment days (i.e., $(iExc + iUnexc)/iMemb$).
- Dependent variables:
 - chronic absence – was created (No, < 10%; yes, \geq 10%).
- Predictors of CART:
 - School data:
 - sex (0=male, 1=female),
 - Within school year move (defined as whether the student had a start date after 09/30)
 - Old for grade
 - Department of Human Service Data (all the following variables are binary; 1=yes, 0=no)
 - CYF (EVER IN Children, Youth, and Families Children)
 - DA (EVER IN Drug & Alcohol - CCBHO and County)
 - EI (EVER IN Early Intervention)
 - FSC (EVER IN Family Support Center)
 - HH (EVER IN Hunger and Homeless)
 - MH (EVER IN Mental Health - CCBHO and County)
 - MR (EVER IN Office of Mental Retardation and Developmental Disabilities)
 - HACP (EVER IN Housing Authority of City of Pittsburgh)
 - DPW: if any of Department of Public Welfare-FS, SSI, and TNF
 - JPO (Ever in JPO children): this is excluded for grades k-5.
 - Census Tract data
 - Median House Sale price of 2013
 - Percentage below poverty level
 - Percentage Black
 - sumoftotal (sum of total delinquency)
 - HsgAgeBefore1914_tract_CountOfma (number of parcels-structure built before 1914)
 - Tract ranking suburbs
 - RankSuburbs_Poverty_12
 - RankSuburbs_Poverty200_12
 - RankSuburbs_FHF_12
 - RankSuburbs_MaleLF_12
 - RankSuburbs_Vacant_12
 - RankSuburbs_NoVehicle_12
 - RankSuburbs_Dropout_12
 - RankSuburbs_Sum

- House assessment data
 - Homestead status
- Three different types of analyses were performed for each grade:
 - **Section 1: Bivariate relationship** between chronic absence and other variables were examined using t-test (for continuous variables) and two-way chi-square (for dichotomous variables).
 - **Section 2: Binary logistic regression** was performed predicting chronic absence by the aforementioned predictors.
 - **Section 3: Classification and tree analysis (CART)** is a data mining method to determine important predictors of categorical dependent variable using a non-parametric iterative process. Unlike logistic regression, CART examines interactions among predictors. CART was performed for the outcome variable Chronic Absence for subjects by each grade.
- There is no missing data on these variables.

1. Bivariate relationship

1.1 Description of house parcel and census tract variables

There are 1909 house parcels and 44.53% is homestead. There are 19 census tracts from which Clairton students were from.

Table 1 presents descriptive statistics of census tract variables over 19 census tracts from which Clairton students were from.

Table 1. Descriptive statistics of census tract variables measured at tract level (N=19)

	Minimum	Maximum	Mean	Std. Deviation
Sum Of Total Delinquency	4440.90	54248.49	26502.84	12372.93

RankSuburbs_Sum	356.00	1800.00	1233.05	409.84

1.2 Description of student-level variables by chronic absence

Bivariate relationship between chronic absence and other variables were examined using t-test (for continuous variables) and two-way chi-square (for dichotomous variables). Effect sizes (Point-Biserial correlation for continuous variables and Cramer's V for dichotomous variables) was examined in order to determine meaningfulness of results. Cramer's V and point-biserial correlation are on the same metric as correlation coefficient (small, 10-.30; medium, .30-.50; large, >.50).

Figure 1. Effect sizes of demographic variables by grades

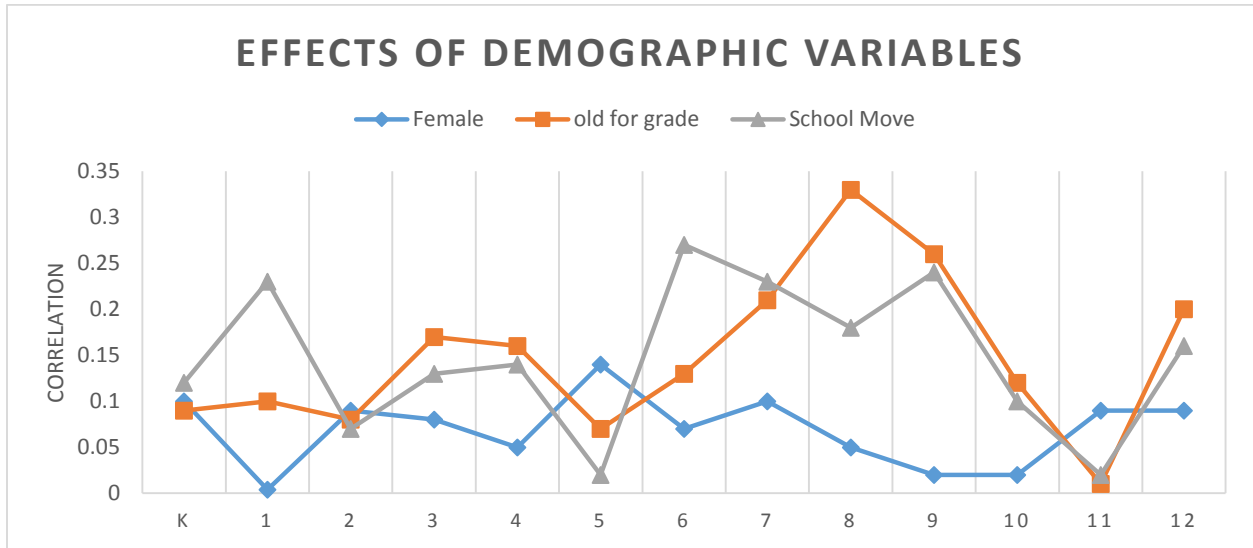

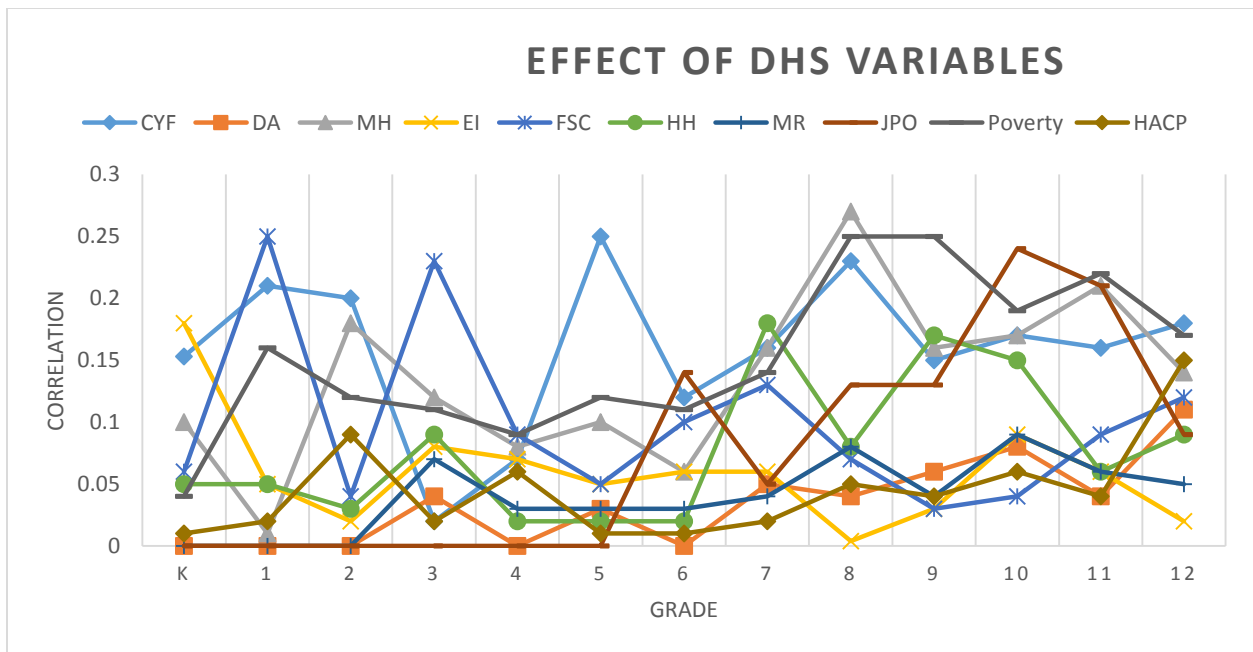

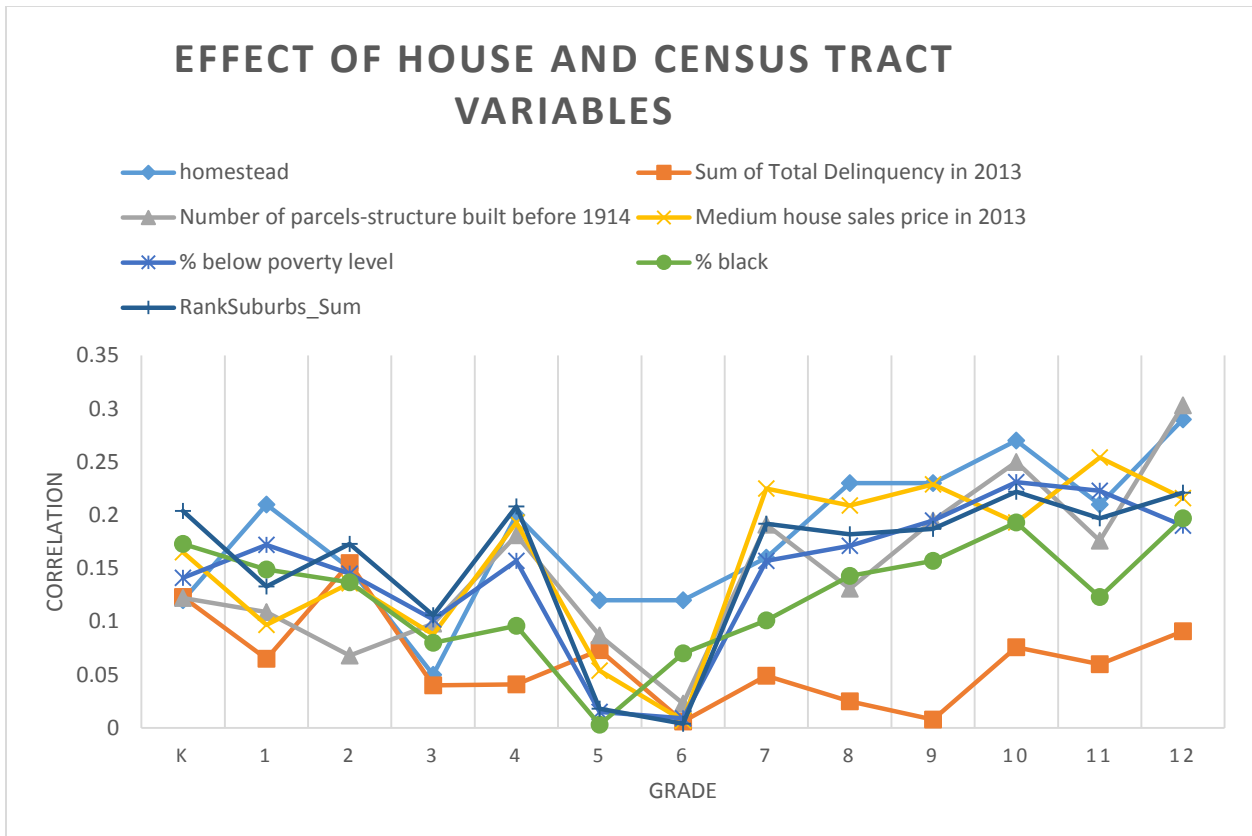

Figure 2. Effect sizes of DHS involvement variables by grades

Among tract ranking variables, the sum track ranking presents consistently significant bivariate relationship with chronic absence, and thus was selected as a census tract variable and presented in Figure 3.

Figure 3. Effect sizes of house and census tract variables by grades

2. Logistic Regression

Logistic regression was used to predict chronic absence for each grade. Among tract ranking variables, the sum track ranking presents consistently significant bivariate relationship with chronic absence, and thus was selected as a census tract variable in both logistic regression and CART. However, the sum track ranking correlated highly with other tract variables, resulting with multicollinearity ($VIF > 10$), and thus was excluded from logistic regression analysis.

Figure 5. Average importance of predictors for Chronic absence across grades 6-12.

3.3 Grade K

- N = 342
- 3 predictors contributed to the classification of chronic absence. CART produced 6 child nodes
- The predictors are: level-1, sum of total delinquency; level-2, number of parcels-structure built before 1914; level-3, percent below poverty level.
- Node 1 had the highest levels of chronic absence (41.1%). Node 1 contained 27.8% of students who were in tracts that had sum of total delinquency less or equal to 16228 in 2013.
- Node 5 had the lowest level of chronic absence (0%) which contained 11.7% of students who were in tracts that had sum of total delinquency more than 16228, number of parcel built before 1914 less or equal to 334 and percent below poverty less or equal to 11.
- The largest node, Node 4, had 35.7% of total students. Node 4 contained student who were in the tracts that had sum of total delinquency more than 16228 and number of parcel build before 1914 more than 334. For this node, 28.7% were identified as chronic absent.
- Overall 75.1% of students were correctly classified.

Table 20. Importance table (Kindergarten)

Independent Variable	Importance	Normalized Importance
RankSuburbs_Sum	0.027	100.00%

Figure 16. Chronic absence by node (Grade 5).

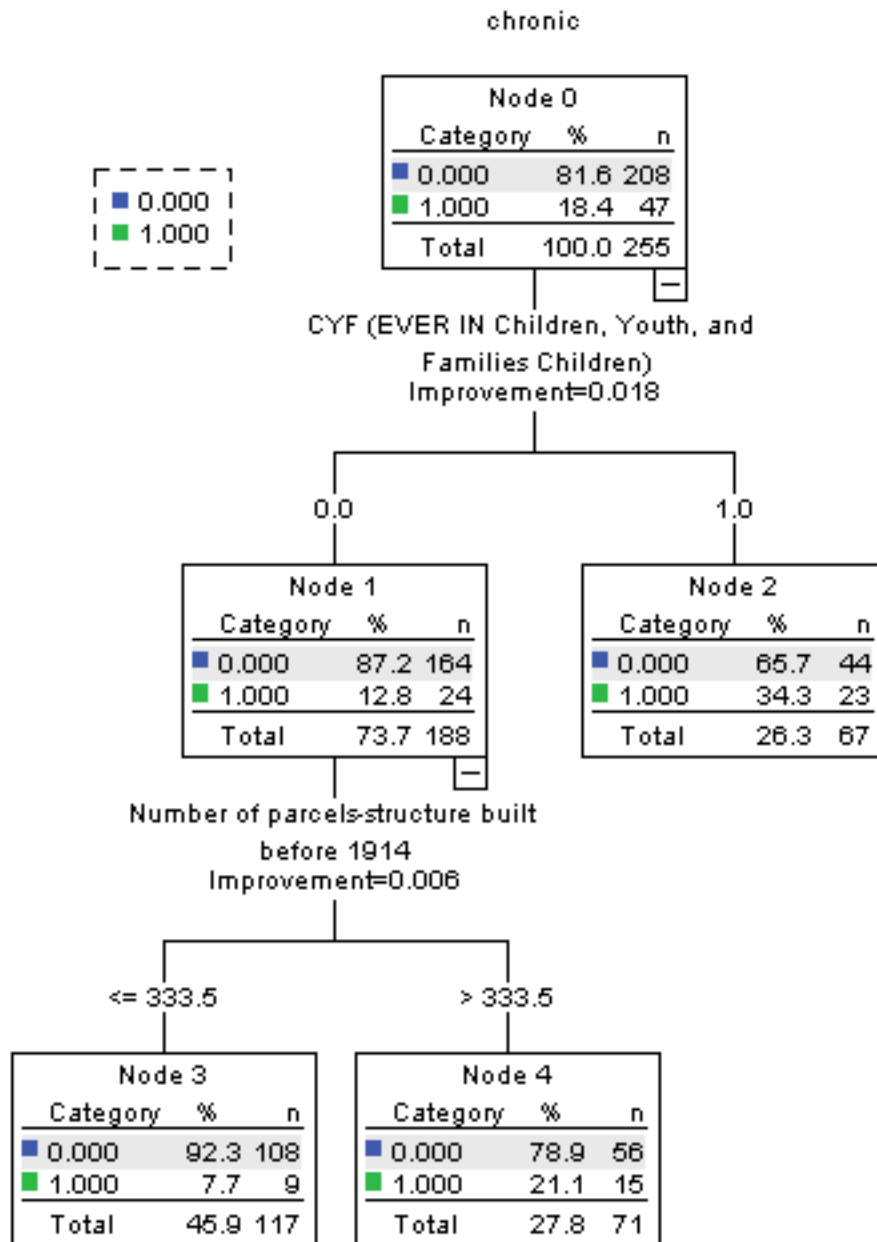

Figure 17. Tree Diagram (Grade 5).

3.9 Grade 6

- N = 271
- No predictor contributed to the classification of chronic absence (i.e., no child node, no importance table or tree diagram).
- Overall, 42 (15.5%) students were chronically absent.

3.10 Grade 7

- N = 250
- 1 predictor contributed to the classification of chronic absence. CART produced 2 child nodes.
- The predictors are: level-1, rankSuburb_Sum.
- Node 2 (also the largest node) had the highest levels of chronic absence (42.9%) which contained 64.4% of students who were in tracts with sum rank for suburb more than 1318.
- Node 1 had the lowest level of chronic absence (16.9%) which contained 35.6% of students who were in tracts with sum rank for suburb less or equal to 1318.
- Overall 66.4% of students were correctly classified.

Table 32. Importance table (Grade 7)

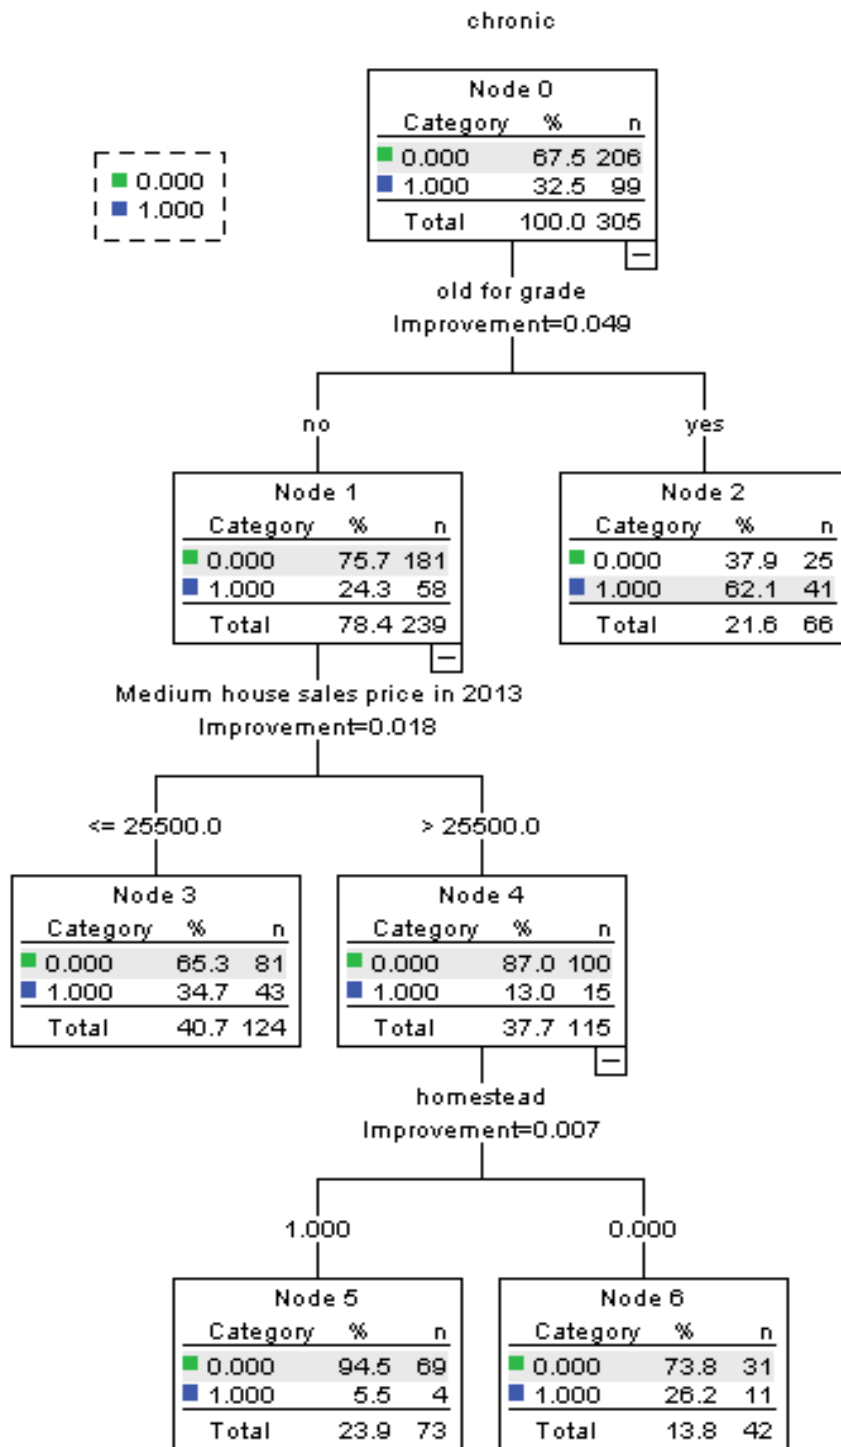

Figure 21. Tree Diagram (Grade 8).

3.12 Grade 9

- N = 289
- 2 predictors contributed to the classification of chronic absence. CART produced 4 child nodes.
- The predictors are: level-1, medium house sales price in 2013; level-2, Poverty (if any of department public welfare-FS, SSI and TNF).
- Node 3 had the highest levels of chronic absence (66.1%) which contained 19.4% of students who were in tracts with medium house sales price less or equal to 62050 and had child poverty (if any public welfare).
- Node 2 had the lowest level of chronic absence (13.4%) which contained 28.4% of students who were in tracts with medium house sales price in 2013 larger than 62050.
- The largest node, Node 4, had 52.2% of total students. Node 4 contained student who were in the tracts with medium house sales price in 2013 less or equal to 62050 and did not have poverty (any public welfare). For this node, 38.4% were identified as chronic absent.
- Overall 69.6% of students were correctly classified.

Table 36. Importance table (Grade 9)

Independent Variable	Importance	Normalized Importance
Medium house sales price in 2013	0.043	100.00%
Number of parcels-structure built before 1914	0.039	92.10%
% below poverty level	0.024	55.20%
Poverty: if any of Department of Public Welfare-FS, SSI, and TNF	0.022	50.40%
RankSuburbs_Sum	0.019	45.20%
% black	0.016	36.30%
MH (EVER IN Mental Health)	0.009	21.10%
HH (EVER IN Hunger and Homeless)	0.008	19.70%
CYF (EVER IN Children, Youth, and Families Children)	0.004	9.20%
Sum of Total Delinquency in 2013	0.002	4.00%

3.13 Grade 10

- N = 282
- 3 predictors contributed to the classification of chronic absence. CART produced 6 child nodes.
- The predictors are: level-1, homestead; level-2, % below poverty level and medium house sales price in 2013.
- Node 4 (also the largest node) had the highest levels of chronic absence (57.7%). Node 4 contained 34.4% of students who did not live in a house with homestead and percent below poverty for the tract was more than 19.3.
- Node 6 had the lowest level of chronic absence (10.0%) which contained 17.7% of students who lived in a house with homestead and in the tract with medium house sales price more than 65825.
- Overall 69.5% of students were correctly classified.

Table 38. Importance table (Grade 10)

Independent Variable	Importance	Normalized Importance
% below poverty level	0.051	100.00%
Medium house sales price in 2013	0.036	70.80%
homestead	0.032	64.00%

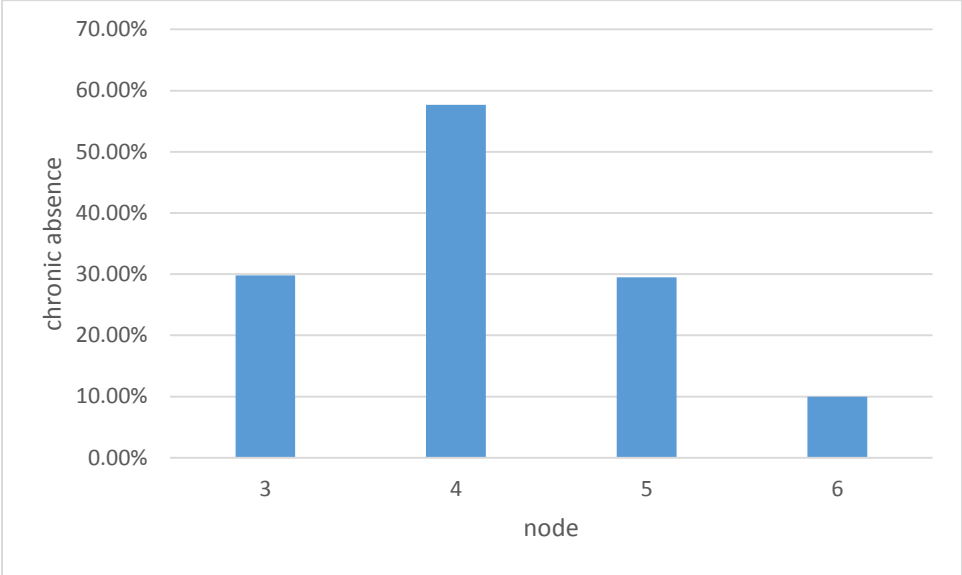

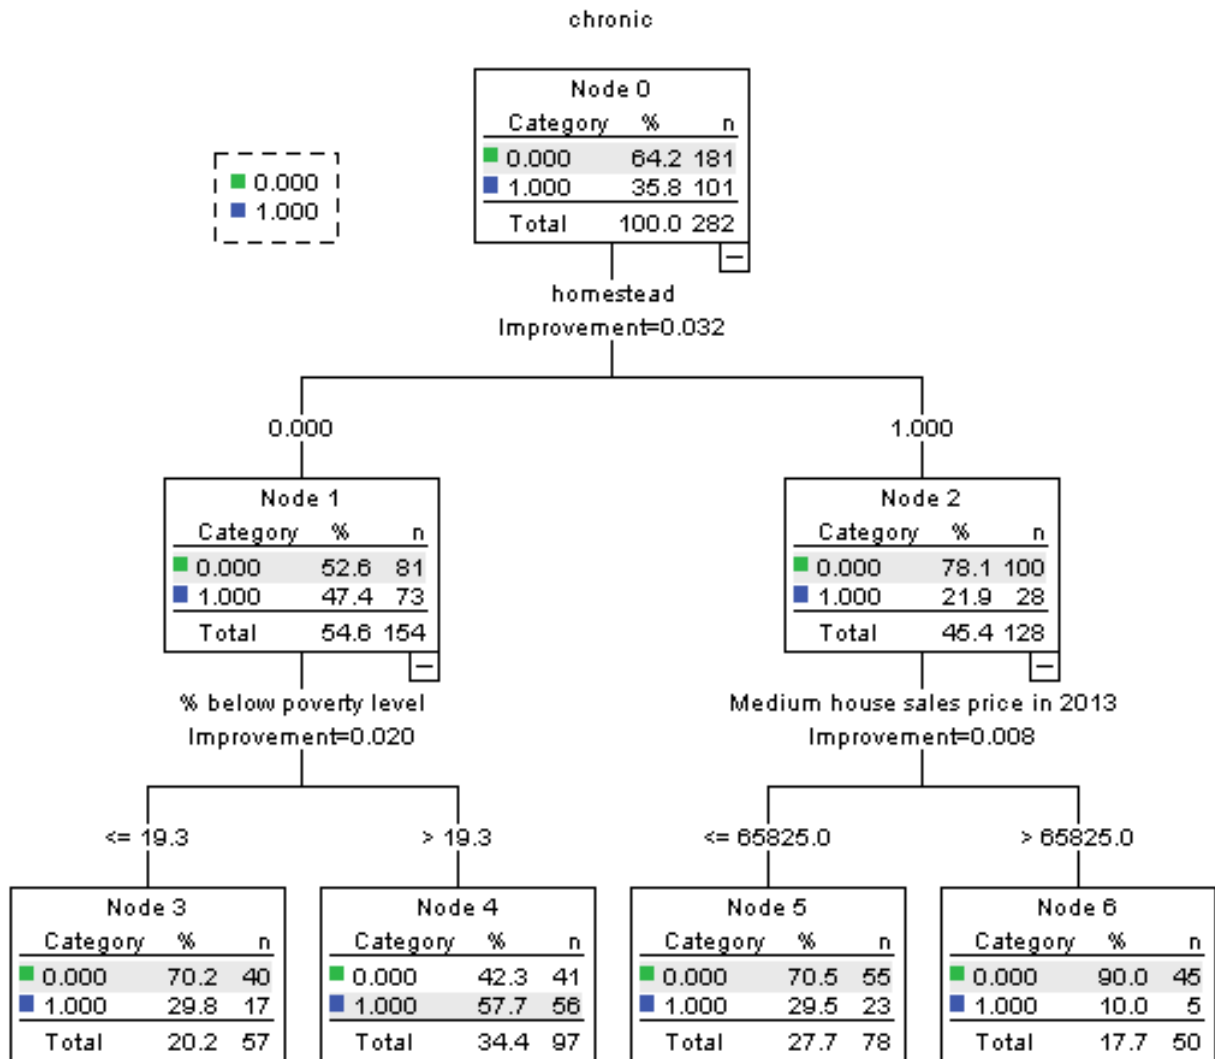

Figure 25. Tree Diagram (Grade 10).

3.14 Grade 11

- N = 247
- 2 predictors contributed to the classification of chronic absence. CART produced 4 child nodes.
- The predictors are: level-1, medium house sales price in 2013; level-2, sex.
- Node 3 (also the largest node) had the highest levels of chronic absence (59.0%) which contained 40.5% of female students who were in tracts with medium house sales price in 2013 less or equal to 62050.
- Node 2 had the lowest level of chronic absence (23.4%) which contained 25.9% of students who were in tracts with medium house sales price in 2013 more than 62050.
- Overall 62.3% of students were correctly classified.

Table 40. Importance table (Grade 11)

Independent Variable	Importance	Normalized Importance
Medium house sales price in 2013	0.032	100.00%
% below poverty level	0.029	90.00%
